Historical Development of Pelvic Surgery  
All specialties in medicine have told the patient so. She agreed to accept  
lived gradually. New specialties are the risk and demonstrated her faith in  
coming into existence as we learn her doctor and the Lord by singing hymns  
and more about each field. In the during the operation. While McDowell  
y days of medicine in the United was performing the operation  
his house  
es it was customary for one man to was surrounded by a crowd of the pa-  
:l a chair of anatomy and surgery  
tient's friends  
who intended to shoot or  
etales and gynecology being included hang him if the patient died. Fortu-  
a surgery. Philip Syng Physick  
often naturally  
she made a rapid recovery and  
sidered the father of American sur- lived for 32 years  
to die at the age of  
held the first chair of surgery in the 78. McDowell's publication of his

first<br>ted States diw)rced from anatomyi¼Œ three suceessfnl eases of  
\"ovariotomy\"<br>s was at the University of Penusyl- (oophorectomy) marks the  
beginning of<br>ia in 1805. At this time John Warreni¼Œ abdominal surgery. The  
operation fell<br>founder of Harvard Medical Schooli¼Œ into disrepute shortly after  
thisi¼Œ but was<br>its first professor of anatmny and sur- popularized by the  
brothers Atlee of Lan-<br>1. Obstetrics was divorced from the easteri¼Œ  
Pennsylvaniai¼Œ about the middle of<br>ir of surgery during the first part of the the  
19tb century.<br> century. Although gynecology began Myomectomy. Anmssat of  
France per-<br>e identified as a specialty during this formed the first recorded  
nayomectomy<br>odi¼Œ its separation from general sur- in 1840. In the United  
States the opera-<br> was more gradual. In facti¼Œ gyne- tion was done shortly  
thereafterbyWash-<br>i¼ŒEgy has not yet been completely ington Atlee. In 1850  
Professor Mussey<br>~reed from general surgery in prac- wrote: \"Of all fire  
achievements of<br>i¼Œ although in almost all medical modern surgery we meet  
withi¼Œ none [is]<br>)ols it is combined with obsteh icsi¼Œ more striking or  
extraordinary than the<br>oophoreetomy-McDowelh Abdomi- operation performed hy  
Professor Atlee<br>surgery may auflaentieally be said to for the removal of fibrous  
tumors.\" A<br> begun in the back woods of Ken- generation later J. Marian Sims  
wrote:<br>y when Ephraim McDowell success- \"The name of Atlee stands without a  
rival<br>~ renroved a large ovarian tumor. He in cmmection with uterine fibroids.  
His<br> studied under John Bell of Lon- operations were so heroic that no man<br>>i¼Œ who suggested the operation to has as yet dared to imitate him.\" In more<br>>)dwelli¼Œ who emried it out in 1809. modern times Victor Bonney in England<br>operation was done without the and Isadore Buhin in this country were<br>efit of  
anesthesia or asepsisi¼Œ the greatest advocates of myomectomy.<br>)dwell  
considered the operation an Their enthusiasm exceeded that of most<br>erimenti¼Œ  
as it truly wasi¼Œ and frankly nmre recent gynecologistsi¼Œ hut myn-<br>
