OSCARS IN GENERAL

POPULAR NAMES

The fish most commonly known to American aqua-

Prium hobbyists as the oscar is also known to them as the

peacock cichlid and velvet cichlid. The names peacock

cichlid and velvet cichlid are more common in Great

Britain and other present and former members of the

three name

(and a few othersi¼ © too) have

br > x

Achieved a degree of currency in all English-speaking

br > lands that harbor aquarists.

The name peacock cichlid is descriptive of the fish in

br > that the oscar is indeed a cichlidi¼ © and adult oscars indeed

bear at least one marking in common with a peacock:

br > the dark spoti¼ © surrounded by a circle of lighter colori¼ ©

br > near the base of the oscar stail is similar tothe \"eye spot\"

br > on a peacock stail. The velvet cichlid nameï¼ ©

probably
 derived from the comparative smallness of the scales"\4\C
 also is descriptive 4 but to a much lesser degree; the br > velvety look of an adult oscarii¼Œ although present if you re
br >inclined to look for such thingsii¼Œ is much less evident
 than the eye spot. The name oscar is neither descriptive
 nor strictly apropos in any other way..i'4Œ but it has stuck.
 I don t believe that anyone knows for sure how a fish
 like this one had the name \"oscar\" tagged onto iti'/4Œ but
br > the name has been around in the aquarium hobby
 almost as long as the >SCIENTIFIC NAME
