affects you. You're not likely to think of it as a danger. We can't protect you from all the steps we used to select towns that are relatively safe. We think our steps are pretty thorough. We also think the odds will be much more in your favor if you live in one of our Safe Places. But if your numbers are up, essentially there were three steps for the XOS: 1. DF/ERM; TILE (.). RAI CRIME RATE. First we calculated a town's overall crime rate. Then we determined the town's population and the number of crimes. If a town has a population of 103,110 and 100 crimes are committed there, we can say that it has a crime rate of 100 per 100,000 inhabitants. But remember: Crime rates are all relative. A town X is safe only in comparison.
