the simpler creatures from which we evolved. do that they do? What similar impulses (if any) animals and men? Emotions can sometimes from performance but ignore for the present of "feelings." Which of our actions are carried subhuman ancestors? With the knowledge recently gained by ethologists like these have become inescapable. They rassing however because they falsely revive distaste for anthropomorphism. Anthropomorphizing of human emotions to animals is a horror to many biologists. It is a horror to us when it includes the assumption that animals serves with values exactly like ours. There are of activity nevertheless which can be studied drawing conclusions about the state of any animal's consciousness. The value of understanding our behavioral role becoming

recognized and yet ethologists are
times accused of anthropomorphism.
The ch
really logical. For many decades it has been
those high forms of
animal life
the vertebrates
in such anatomical structures
as
skeletons. T
