CHAPTER OP~eii¼E<br> 5 S u<br> You cannot learn to drive a car or play<br> golf simply by reading a book. You can<br> learn the basic principles in this man-<br> neri¼E but to become a good driver or a<br> competent golfer you must have a<br> certain amount of experience.<br> This is equally true in the creative arts. You learn to paint by painting<br> and to play the piano by practicing. Quite oftenii¼E the advancement you make<br> in your chosen art depends entirely upon how you begin. Let s say that in a<br> desire to become a painter you choose to copy a large canvas by van Gogh.<br> The bold brush strokesii¼E intricate blending of colori¼E and complex composition<br> of a genius like van Gogh might frustrate you. If this is your first effortii¼E it<br> is altogether possible that you might abandon the project before you are a<br> quarter of the way throughii¼E thus ending your career as an artist before it<br> had a chance to get started.<br> Many people have learned that the secret of success in learning a creative<br> art is in beginning with a basic project--something that is easy to execute<br> and that will produce a finished product in a short amount of time. This<br> gives the beginner not only a sense of accomplishmentii¼E but a certain amount<br> of valuable practice.<br> So let s start right ott with a needlepoint project. This may seem to be<br> a reverse approach because you will be asked to do certain things without<br> understanding why you are doing them. Howeverii¼E if you begin with this<br> project right nowi¼E you will gain valuable experience while you are reading<br> about the various needlepoint techniques and materials. You can finish this<br> first project in one evening while you are watching television.<br> 1<br>
