Preface
The immunization decision faces every parent very soon after birth. Most parents are ill-equipped to make this important decision. The current massive effort to vaccinate all children in the United States usually results in a predetermined decision. At the same time, there is growing concern among parents and the public about the safety of routine immunization. Unfortunately, information about the vaccines is not always available. Parents have the responsibility to provide the best health for their child. They must decide whether it is in their child's health to give the vaccines or not. If in doubt, the validity or wisdom of administering vaccines is a difficult decision. This book is intended to help parents receive little support in their efforts to question the wholesale policy of mass immunization on their child. The book has two functions. One is to give information about the vaccines, and their side effects. The effects of vaccines usually are hidden from parents. Professionals have often stated that broadcasting vaccines to the public would cause unnecessary fear and hinder the vaccine campaign. Dr. Baruch characterized this position quite clearly in a panel
