Review

'... a magisterial study ... [Hurwit] displays immense erudition and command of the scholarly literature ... Yet far from producing a dryly academic treatise, Hurwit constructs a vivid picture of this multipurpose hub of urban life and details just how the Acropolis was used, when and by whom.' New York Times Book Review 'For sheer volume of information presented in an accessible format ... the book has no peer and it certainly should be part of the library of every serious student of ancient Athens ... Hurwit gives us what must be pretty much the last word on the Acropolis of the 20th century. Thanks to this book, it is a monument we can revisit again and again.' Bryn Mawr Classical Review 'This is a monumental undertaking, and the resulting book is a very wide-ranging and detailed survey of the most famous site in the Greek world.' The Classical Review

果然写得好。读了2章，第一章就抓住了我——讲的是卫城的地质史是怎样变成后来的城市史的。有两点是重要的。（1）在卫城上部，是花岗岩，但就在花岗岩的下部，存在着层蓄水层，这就是古代雅典人在卫城居住时代里打井取水的水源层；（2）整地的地貌是倾斜的，正好就是雅典卫城走向的方向。这就说明神庙的走势，原本有着自然地貌的依据；第二章，则详细考据了雅典娜的由来，出乎意料之一，她的名字在后，卫城的山头的名字在先；之二，她的早期形象出现在了迈锡尼遗址。。。。
