Work in groups to "get the facts" about your school building. Then you can put together a class book of architectural facts about your school. Each group will find out about one architectural item, such as rooms, stairways, steps, or windows, counting the number of that thing in your school. For example, if your group is finding out about

"stairs," you will work with your group members to count all the stairs in your school.
Get ready to start counting!
