This book is about using game theory in mathematical modelling. It is an introductory text, covering the basic ideas and methods of game theory as well as the necessary ideas from the vast spectrum of scientific study where the methods are applied.

It has by now become generally apparent that game theory is a fascinating branch of mathematics with both serious and recreational applications. Strategic behavior arises whenever the outcome of an individual's action depends on actions to be taken by other individuals—whether human, as in the Prisoners' Dilemma, or otherwise, as in the “duels of damselflies”. As a result, game-theoretic mathematical models are applicable in both the social and natural sciences. In reading this book, you can learn not just about game theory, but also about how to model real situations so that they can be analyzed mathematically.

Mesterton-Gibbons includes the familiar game theory examples where they are needed for explaining the mathematics or when they provide a valuable application. There are also plenty of new examples, in particular from biology, such as competitions for territory or mates, games among kin versus games between kin, and cooperative wildlife management.

Prerequisites are modest. Students should have some mathematical maturity and a familiarity with basic calculus, matrix algebra, probability, and some differential equations. As Mesterton-Gibbons writes, “The recurring theme is that game theory is fun to learn, doesn't require a large amount of mathematical rigor, and has great potential for application.”

This new edition contains a significant amount of updates and new material, particularly on biological games. An important chapter on population games now has virtually all new material. The book is absolutely up-to-date with numerous references to the literature. Each chapter ends with a commentary which surveys current developments.

Agenda 18

Chapter 1. Noncooperative Games 26

§ 1.1. Crossroads: a motorist's dilemma 26

§ 1.2. The Hawk-Dove game 31

§ 1.3. Rational reaction sets and Nash equilibria	33
§ 1.4. Four Ways: a motorist's trilemma	43
§ 1.5. Store Wars: a continuous game of prices	49
§ 1.6. Store Wars II: a three-player game	59
§ 1.7. Max-min strategies	68
§ 1.8. Commentary	70
Exercises 1	71
Chapter 2. Evolutionary Stability and Other Selection Criteria	76
§ 2.1. Harsanyi and Selten's criterion	76
§ 2.2. Kalai and Samet's criterion	80
§ 2.3. Maynard Smith's criterion	82
§ 2.4. Crossroads as a continuous population game	91
§ 2.5. An example of population dynamics	97
§ 2.6. Discrete population games. Multiple ESSes	99
§ 2.7. Asymmetry of role: Owners and Intruders	105
§ 2.8. Spiders in a spin—a case of anti-Bourgeois?	117
§ 2.9. Commentary	119
Exercises 2	121
Chapter 3. Cooperative Games in Strategic Form	126
§ 3.1. Unimprovability: group rationality	127
§ 3.2. Necessary conditions for unimprovability	134
§ 3.3. The Nash bargaining solution	140
§ 3.4. Independent versus correlated strategies	145
§ 3.5. Commentary	149
Exercises 3	149
Chapter 4. Characteristic Function Games	152
§ 4.1. Characteristic functions and reasonable sets	153
§ 4.2. Core-related concepts	160
§ 4.3. A four-person car pool	165
§ 4.4. Log hauling: a coreless game	169
§ 4.5. Antique dealing. The nucleolus	172
§ 4.6. Team long-jumping. An improper game	182
§ 4.7. The Shapley value	185
§ 4.8. Simple games. The Shapley-Shubik index	190
§ 4.9. Commentary	192
Exercises 4	192
Chapter 5. Cooperation and the Prisoner's Dilemma	198
§ 5.1. A laboratory prisoner's dilemma	200
§ 5.2. A game of foraging among oviposition sites	203
§ 5.3. Tit for tat: champion reciprocative strategy	207
§ 5.4. Other reciprocative strategies	211
§ 5.5. Dynamic versus static interaction	225
§ 5.6. Stability of a nice population: static case	230
§ 5.7. Stability of a nice population: dynamic case	232
§ 5.8. Mutualism: common ends or enemies	236
§ 5.9. Much ado about scorekeeping	241
§ 5.10. The comedy of errors	243
§ 5.11. Commentary	246
Exercises 5	250
Chapter 6. More Population Games	254
§ 6.1. Sex allocation: a game with a weak ESS	255
§ 6.2. Damsely duels: a war of attrition	256
§ 6.3. Games among kin versus games between kin	265
§ 6.4. Information and strategy: a mating game	270

§ 6.5. Roving ravens: a recruitment game	276
§ 6.6. Cooperative wildlife management	286
§ 6.7. Winner and loser effect	296
§ 6.8. Stomatopod strife: a threat game	311
§ 6.9. Commentary	323
Exercises 6	327
Chapter 7. Appraisal	332
Appendix A. The Tracing Procedure	340
Appendix B. Solutions to Selected Exercises	344
Bibliography	372
