The conflict between tile wife and the "other woman" is as old as marriage itself. Based on five hundred personal interviews, this provocative and highly readable study is the first analysis of the battle as it is tbught

today.

Do you know the early warning signs of an affair? The role children play, both as weapons and targets, and of the "best friend betrayal" syndrome? Shirley Eskapa answers these questions and many others as she explodes the myth that the "other woman" is invariably the consequence and never the cause of a failing marriage.
