Every seventy-six years the most famous comet in history makes its journey around the Sun. This spectacular voyager identified by Edmond Halley (rhymes with alley) in 1682 will enter the Earth's orbit in November 1985 and will make its closest approach to Earth in April 1986.

The New York Times Guide to the Return of Halley's Comet will help us meet the comet in the most well-prepared, best-equipped fashion possible. With a wealth of illustrations, including stunning state-of-the-art outer space photographs, the book covers all aspects of the comet: its schedule, its scientific history, its anatomy, where to see it. The authors explain what equipment you will need to see it (less than you think) and relate the rich mythology, lore and superstitions that have accompanied the comet since it was first recorded in 467 B.C.

The New York Times Guide to the Return of Halley's Comet will prepare you for a once-in-a-lifetime event, but the knowledge and excitement imparted by the book will serve you every time you look into the heavens.
