Product Description

Sometimes architects design extraordinary buildings, but in accepting the praise for innovation, the contribution of the building's engineer is forgotten. This book seeks to set the record straight through the examination of some of the most significant engineers working today, together with a selection of the most remarkable recent buildings. It focuses on 25 case studies of projects by engineers from around the world, unravelling the relationship of the engineer with the architect in each case. It becomes clear that really innovative architecture is rarely conceivable without interpretation by

engineers with aesthetic sensibility. Internationally renowned firms and engineers include Ove Arup, Atelier One, Santiago Calatrava, Dewhurst McFarlane, Anthony Hunt Associates, Techniker and Buro Happold. The book features such high-profile projects as the London Eye, the Spandau Station in Berlin and the Tokyo International Forum.

作者介绍:

About the Author

Sutherland Lyall is a freelance writer and the author of numerous books, including The State of British Architecture (1980), Santiago Calatrava: Dynamic Equilibrium: Recent Projects (1992) and Designing the New Landscape (1998). He was also the editor of Critic Writes: Essays by Reyner Banham (1996).
