Until recently, learning CoreDNS required reading the code or the skimpy documentation on the website. No longer. With this practical book, developers and operators working with Docker containers will understand how to use this standard

DNS server with Kubernetes.

John Belamaric, senior staff software engineer at Google, and Cricket Liu, Chief DNS Architect at Infoblox, show you how to configure CoreDNS using real-world configuration examples for achieving specific purposes. You'll learn the basics of DNS, including how DNS functions as a location broker in container environments, and how it ties in to Kubernetes.

作者介绍:

Cricket Liu is the co-author of all of O'Reilly's Nutshell Handbooks on the Domain Name System, DNS and BIND, "DNS on Windows NT," DNS on Windows 2000, DNS on Windows Server 2003, and DNS & BIND Cookbook, and was the principal author of "Managing Internet Information Services."

Cricket is Infoblox's Chief DNS Architect and serves as a liaison between Infoblox and the DNS community. He worked for HP for nearly 10 years, where he ran hp.com, one of the largest corporate domains in the world, and helped found HP's Internet consulting business. Cricket later co-founded his own Internet consulting and training company, Acme Byte & Wire. After Network Solutions acquired Acme Byte & Wire and later merged with VeriSign, Cricket became director of DNS Product Management.

John Belamaric is an experienced software engineer and architect with over 20 years of software design and development experience. He works on the Google Cloud team, focused on Kubernetes and GKE. He is also a core maintainer of CoreDNS, a CNCF project that provides dynamic, DNS-based service discovery in Kubernetes and other container and cloud stacks. He is a Senior Staff Software Engineer at Google, holds three patents, and is a co-author of "OpenStack Cloud Application Development".

评论

之前工作需要，在K8s上升级Kube-dns为CoreDNS。作者很权威，出版了一系列DNS书籍，而且书中包含了DNS基本知识，特别讲到了CoreDNS在K8s的原理和配置解读，完美适合买书的期望，作为入门书很好。就是小贵，要70AUD

还是得看文档
