isbn:9780415360845

This key text presents students with a holistic view of the building design process, bridging the gap between the theory and the actuality of constructing and assembling buildings. "Integrated Strategies in Architecture" encourages and enables students to

grasp a sound understanding of the purpose of buildings, the specialisms that contribute and the technology available. Zunde and Bougdah thoroughly introduce and expose the concepts and technologies that underlie the design process, setting current design in context as part of an evolutionary process, exemplified through historic and contemporary models, and emphasizing the importance of applying a broad variety of technologies in the creation of successful buildings. Topics covered include: space planning; colour theory; communication; management; aesthetics; structures; and environmental control. This essential text will greatly assist students of architecture and its technology, construction management and building surveying, as well as practitioners as they strive to build better buildings.
