Product Description

Modern web application user interface design requires rapid development and proven results. jQuery UI, a trusted plugin for the jQuery JavaScript library, gives you a trusted platform on which to build rich and engaging interfaces with maximum compatibility, stability, and a minimum of time and effort.

jQuery UI has a series of ready-made, great-looking user interface widgets and a comprehensive set of core interaction helpers designed to be implemented in a consistent and developer-friendly way. With all this, the amount of code that you need to write personally to take a project from conception to completion is drastically reduced. This book has been written to maximize your experience with the library by breaking down each component and walking you through examples that progressively build upon your knowledge, taking you from beginner to advanced usage in a series of easy to follow steps.

In this book, you'll learn how each component can be initialized in a basic default implementation and then see how easy it is to customize its appearance and configure its behaviour to tailor it to the requirements of your application. You'll look at the properties and methods exposed by each component's API and see how these can be used to bring out the best in each component.

Events play a key role in any modern web applications if it is to meet the expected minimum requirements of interactivity and responsiveness, and each chapter will show you the custom events fired by each component and how these events can be intercepted and acted upon.

Approach

An example-based approach leads you step-by-step through the implementation and customization of each library component and its associated resources in turn. To emphasize the way that jQuery UI takes the difficulty out of user interface design and implementation, each chapter ends with a 'fun with' section that puts together what you've learned throughout the chapter to make a usable and fun page. In these sections you'll often get to experiment with the latest associated technologies like AJAX and JSON.
