Perfectly suited to the innovative Problem Design Solution approach, ASP.NET MVC is a new development model that separates code for the data, look, and business

processes of a Web site. This nuts-and-bolts guide thoroughly covers creating a Web site with MVC and discusses solving the most common problems that you may encounter when creating your first application or trying to upgrade a current application. The material is based on the highly praised and widely used TheBeerHouse ASP.NET Starter Kit that was developed in the bestselling ASP.NET 2.0 Website Programming: Problem–Design–Solution. Additional coverage includes registration and membership systems and user-selectable themes; content management systems for articles and photos; polls, mailing lists, and forums; e-commerce stores, shopping carts, and order management with real-time credit card processing, and more.
