The Mexican government has established a clandestine organization to facilitate the emigration of its citizens into the United States. John Bodie discovers a printing plant that is secretly printing identification cards and documents for the illegal immigrants on a national level. It also houses and trains these individuals in obtaining social security, welfare benefits, health care, education and employment. He must overcome the resistance of the local police chief and his good friends with the top secret Terrorist Activity Control Team. In the process of his investigation, one of his close friends is killed, a police officer loses his life, and his intimate friend is hospitalized along with his long-time colleague and a member of the federal secret organization. A plan is formulated to infiltrate Sonora, Mexico, and destroy the furtive emigration headquarters without creating an international incident. A most interesting and timely novela]
