This is a novel about war, and the people who  
fight it.

Harold Coyle's first novel, Team Yankee, was a  
New York Times best-seller--a book that Tom  
Clancy described as "stunning and powerful," and  
General Sir John Hackett (author of The Third  
World War) called "a convincing picture of war at  
the company level."

Sword Point begins with an army at peace, as

ordinary men and women--soldiers--go about their daily lives, unaware that thousands of miles away, the war they have been preparing for is about to begin--for the Soviet Union is on the eve of invading Iran to secure its borders against the spread of Moslem fundamentalism and to seize the Strait of Hormuz, together with the free world's oil supply....

Coyle's ability to recreate the fury of battle is equaled only by his gift for making both the grand strategy and the minute-by-minute soldier's view of war equally clear, compelling and fascinating.

But what makes *Sword Point* special is the human element: each character in Coyle's huge cast is unforgettable and sharply etched, from the young American lieutenant thrust into combat for the first time to a Soviet officer who is repelled by the cold inhumanity of his KGB superior.

He takes us from the White House and the Kremlin to the battlefield, as the life of each character is changed--or brutally ended--by the rapidly escalating war, while the stakes are raised, with the Iranians reportedly on the verge of assembling a nuclear device.

No reader will ever forget the protagonists of this desperate battle, among them:

~ Lt. Gen. Weir, the American Corps Com-

mander, who must fight and win a war on faraway, hostile terrain, against superior numbers, or see his army destroyed...
