Once, many believed that science would provide a description of the universe that would make religion obsolete. Theologians, for their part, had adopted a largely defensive posture, representing themselves as defenders of the faith "once-for-all delivered" assuming the progress of science offered nothing to theology.

Here, the author of The Templeton Plan along with a distinguished scientist unfold the wonderful irony of the situation as they depict a world where God is revealing himself-through science--at an ever-increasing pace. "This is a book about signals of transcendence," the authors write, "about pointers to the Infinite that are coming to us not from mystics but instead through the most recent findings of science. The God of Scripture, of historic Judaism and Christianity, is essentially unknown to modern humankind. The images of
