isbn:9780415924429

With penetrating insight into urban cyberspace and the challenges and implications for urban planning in the age of telecommunications, Cities in the Telecommunications Age brings together the latest research on how changes and innovations in the economic system are being fuelled by networks of telecommunicators. The contributors provide illuminating case studies of how communications technologies have brought about the restructuring of cities, such as Atlanta, Phoenix, and Sunderland. The contributors include: Manuel Castells, Simon Marvin, Stephen Graham and David B. Audretsch
