The Sword Master

pits the technologically driven nation of Japan against an industrially declining America in a struggle for world supremacy.

Art Garrett, entrepreneur and president of one of Silicon Vailey s smallest but most successful high-tech firms, is rocked by the sudden disappearance of his most sophisticated 256K optical chip, a vital component

in the Pentagon's new electronic arsenal. Garrett suspects the Russians, of course, until his friend Sally Hendricks, an Asian scholar, unravels the threads of industrial espionage that lead them to Tokyo. Here Fukuda Kenji, a director of planning for the global giant Matsuzaka Electric, who is infused with the samurai spirit of Musashi and inspired by his beautiful mistress, has managed to procure this prized technology that his isolated island country must have to achieve economic independence. These chips will soon hold all life on this planet hostage.
