出版时间:1994-09-22

装帧:Hardcover

isbn:9780262193504

Assembled by the prominent psychologists Daniel Schacter and Endel Tulving, the contributions in Memory Systems 1994 focus on the nature and number of memory systems in humans and animals. Together they present ideas from cognitive

psychology, neuropsychology, and neuroscience in a review of intriguing experimental outcomes at the cutting edge of this domain, grappling, often passionately, with the behavioral and neuroanatomical composition of memory systems and subsystems. Chapters are revised versions of contributions that appeared in a special issue of the Journal of Cognitive Neuroscience. This book includes an integrated discussion of and cross-commentary on the earlier contributions.A Bradford Book
