The question of the presence of various asymptotic properties of the solutions of

ordinary differential equations arises when solving various practical problems. The investigation of these questions is still more important for impulsive differential equations which have a wider field of application than the ordinary ones. The results obtained by treating the asymptotic properties of the solutions of impulsive differential equations can be found in numerous separate articles. The systematized exposition of these results in a separate book should satisfy the growing interest in the problems related to the asymptotic properties of the solutions of impulsive differential equations and their applications.
