What are the parts of a plant? Do all cactus plants have leaves? Why are leaves green? There is a huge variety of plants in the world. They range from tiny bean sprouts to

huge cactus plants and giant redwood trees. Even though plants can look very different, most are made up of the same basic parts. 'Plant Parts' examines and explains each of these structures. 'The Life of Plants' series explores the amazing world of plants. Learn about the different elements of plants, including plant structures, life processes, plant classification, and plant uses. Examples range from familiar plants to fascinating plants. Activities and experiments are included in each book to give you a chance to apply what you have learned.
