Forensic science has helped bring bo justice some of the most evil,devious and dangerous criminals in history. Using advanced technology,dogged research and intelligent analysis,forensic scientists can follow a trail of DNA,fingerprints,ballistics records and microscopic fibres directly to a criminal.Featuring accounts of hundreds of

real-life crime investigations and illustrated with more than 450 photographs, Crime investigation takes a global look at how forensic science has evolved from ancient times to today's Crime Investigation takes a global look at how forensic science has evolved from ancient times to today's sophisticated technologies, including: Infrared spectrometers which can identify the exact nature of clothing fibres left by suspects • CT scanners, used to pinpoint weapons in suitcases • Software programmes and specialist modelers able to rebuild a victim's facial features over a bare skull • DNA profiling - a revolutionary tool which has allowed investigators to solve 'cold case' decades old, using evidence based on just a few cells.
