isbn:9780471944300

This book responds to the explosion of interest in using the methods of experimental cognitive psychology to help understand emotional disorders, especially common anxiety and depressive disorders. It reviews recent research, focusing on how emotion affects the following: conscious and non-conscious processing, memory bias and memory deficits, attentional bias, schematic processing, judgements, thoughts and images. It also explores how irregularities in these processes can contribute to emotional disorders
