Through observation and easy scientific experiments, young readers can experience how the various kinds of weather impact the earth. Each of six types of weather is profiled in two volumes. The first volume focuses on how the weather affects people, and the second focuses on how it affects the earth. With vivid photographs, a helpful

glossary, accurate charts, and informative text, this series will thrill nature lovers and burgeoning scientists!

Without the sun, Earth would be barren -- a dry, dusty desert that could not support life. However, if Earth is dry and hot enough, a drought can occur and all life on Earth is then threatened. Discover the careful balance required for survival on Earth in this informative edition.
