Through observation and easy scientific experiments, young readers can experience how the various kinds of weather impact the earth. Each of six types of weather is profiled in two volumes. The first volume focuses on how the weather affects people, and the second focuses on how it affects the earth. With vivid photographs, a helpful

glossary, accurate charts, and informative text, this series will thrill nature lovers and burgeoning scientists!

When drought happens, people are forced to cope with having little or no water, increased temperatures, and possible harm from the sun's radiation. From sunbathers to global warming, observe how this harsh condition affects both human and plant life.
