出版者:Cambridge University Press

出版时间:1987

装帧:Paperback

isbn:9780521339919

台湾清华大学人类学研究所“宗教人类学”课指定读物

In this important, scholarly, and wide-ranging text, Brian Morris provides a lucid outline of the nature of the explanations of religious phenomena offered by such great thinkers as Hegel, Marx, and Weber. In doing so he also unravels the many theoretical strategies in the study of religion that have been developed and explored by later anthropologists. Besides discussing the classical authors and the debates surrounding their work, Morris presents perceptive accounts of more contemporary scholars such as Jung, Malinowski, Levi-Strauss, Geertz, and Godelier. Written from the standpoint of critical sympathy, and free of jargon, this book is an invaluable guide to the writings on religion of all the major figures in anthropology.
