Four principal papers and a total of 43 peer commentaries on the evolutionary origins

of morality. To what extent is human morality the outcome of a continuous development from motives, emotions and social behaviour found in nonhuman animals? Jerome Kagan, Hans Kummer, Peter Railton and others discuss the first principal paper by primatologists Jessica Flack and Frans de Waal. The second paper, by cultural anthropologist Christopher Boehm, synthesizes social science and biological evidence to support his theory of how our hominid ancestors became moral. In the third paper philosopher Elliott Sober and evolutionary biologist David Sloan Wilson argue that an evolutionary understanding of human nature allows sacrifice for others and ultimate desires for another's good. Finally Brian Skyrms argues that game theory based on adaptive dynamics must join the social scientist's use of rational choice and classical game theory to explain cooperation.

## 评论

该书对众多道理伦理、生物、历史等领域里的学者的相关研究论文进行了总结。从内容上讲，这本2000年出版的书，其实是对1978年的Morality as a Biological Phenomenon (1978 by Gunther Stent) 的补充和完善。
