著者:Jonathan Ashley-Smith

出版者:Butterworth-Heinemann

出版时间:1999-04-29

装帧:Paperback

isbn:9780750628532

"Risk Assessment for Object Conservation" reflects Dr Jonathan Ashley-Smith's personal interests and views in areas including materials science, the ethics of restoration, the costs of conservation and the philosophy of museums. This valuable book explains the mechanisms of deterioration of museum artifacts, quantifying the probability that damage will occur and estimating the rate of progress when it does. The principles outlined and the information provided will form a foundation for cost-benefit analysis of conservation proposals. Dr Ashley-Smith also gives comprehensive explanations of scientific and mathematical material to take into consideration the readers who have no background in these areas, alongside a basic introduction. The structure of the book provides a logical progression through tools, concepts, information and examples. This is a must-have purchase for all conservators, curators and administrators of historic artifacts at both student and professional level. This is a pioneering book on this subject. It offers guidance on reduction of risk to exhibits. The author is the Head of Conservation at the Victoria and Albert Museum.
