Beyond disclosure, Light-Seeds unearths the oldest story known to mankind: Earth has been visited by beings from other worlds since the beginning. Extra-terrestrials have not only lived on Earth; there are portals & dimensional crossings that are active now. Many strange lights observed in the skies have a special interest in Earth - some are "friendly" and some are not. Humans are the key to their own destiny. How we navigate the next hundred years will determine our future as a planetary species. Until 2024-25 we will live through "The Winter of The 21st Century", which will mirror chaotic societal changes to which we have to adapt from within with clarity and purpose. By 2011 there will be many moments of highest intensity on this planet. The world economy will have collapsed and there is only a short time to be mentally transformed, spiritually coherent and physically ready for this unprecedented hyper-dimensional shift in our realities. Light-Seeds includes: Zen of Stars and FORESEEN in one volume.
