At any given moment during a project, an architect must keep in mind literally thousands of details: weight and resistance of material, size and specifications of heating and electrical installations, acoustic protection, properties of insulating material, and on and on. This manual has been specifically designed as an exhaustive reference for the architectural of building professional, comprising thousands of easy-to-find facts – conversion tables, legal standards, technical specifications, properties of material, etc. All of which makes this a book that no architectural professional should go without.
