The individual nature of the transition from being a member of the workforce to being retired has been the focus of previous books on retirement. In contrast, this book explores the impact of retirement upon family relationships and functioning. Among the topics examined are: gender and ethnic differences; the roles of children and siblings; and the multiple changes retirement creates in marital interaction. The contributors also discuss various theoretical models, analyses of research and methodological problems associated with studying families with retired members, and present new data on these issues.
