Explores ways in which Trinitarian theology interfaces with major themes of systematic theology. The driving force of Trinitarian Soundings in Systematic Theology is that all of theology is to be shaped in view of the doctrine of the Trinity. To borrow a statement from Robert Jenson, the Trinity "is not a separate puzzle to be solved but the framework within which all theology's puzzles are to be solved". This book explores ways in which Trinitarian theology interfaces with major themes of systematic theology. Given that there are few systematic theologies done 'trinitarianly', the collective project will serve as a road map that suggests a path to follow in the formulation of each particular doctrine. Trinitarian Soundings in Systematic Theology is unique as it presents the major themes of systematic theology from a Trinitarian perspective through the contributions of leading and emerging scholars in the field. The study promises to become an important work for those interested in theology, as its contributors include veteran theologians like Colin Gunton, Robert Jenson, James Houston, Georg Pfleiderer and Stanley Grenz. Additionally, this volume includes contributions from a few younger theologians who are employing this Trinitarian focus with renewed zeal. In all, this collection represents an exciting exploration in systematics, showing how profitable it is to approach all aspects of the faith from a self-consciously Trinitarian perspective.
