Heart disease in women is a growing epidemic that presents new challenges to physicians and patients alike. This book, authored by three highly experienced board certified cardiologists who specialize in heart disease prevention can help you prevent heart disease in your daughter, your mother, or yourself. In a simple, concise and easy to understand format, you will learn how to detect symptoms, learn about cardiac risk factors, understand current state of the art testing and treatments for coronary disease, heart failure and arrhythmias. You'll learn about the latest on lifestyles and exercise, hormone replacement, vitamins and supplements. There's much more, too.
