Technology, Innovation and Industrial Economics: Institutional Perspectives, inspired by the work of William E. Cole, Professor Emeritus at the University of Tennessee at Knoxville, extends his work with essays on technology, innovation and industrial economics from an Institutionalist perspective. The managerial style, innovational practices and industrial setting of the continuous improvement firm are central to several chapters. This volume also features innovation and technology in Latin America, Adam Smith's writing on entrepreneurship and a comparison of American and European Institutionalism. The topics of technology, innovation, industrial organization and industrial policy are being widely discussed and debated in today's literature, but seldom from an Institutionalist perspective. The purpose of this book is to reduce substantially this missing dimension in the ongoing debates on these important issues.
