Why is the sky blue and why are sunsets red? When can I see a rainbow? Why is the moon sometimes visible in daylight? In *Out of the Blue* skywatcher John Naylor offers practical advice about where and when you can expect to see natural phenomena, what you will see and how to improve your chances of seeing it. He takes in both the night and the day sky, and deals only with what can be seen with the naked eye. Drawing on science, history, literature and mythology, and written in a popular style that assumes only basic scientific know-how, *Out of the Blue* is for everyone who enjoys being outdoors and who feels curious or puzzled about things optical and astronomical.

评论

The art of seeing nature is a thing almost as much to be acquired as the art of readings. However extraordinary it may seem, it remains a fact that the things one notices are the things with which one is familiar, it is very difficult to see new things even when they are before our very eyes.
