This book presents the classical theory from a systems point of view, including physical and biological systems. Besides making system theory the unifying take, the book offers an abundance of applications, examples, and problems including many intended for use with MATLAB. "Differential Equations with Applications" is designed for engineers and scientists. It presents systems of ordinary differential equations and combines classical techniques, applications, and computer solutions. A valuable reference book on differential equations for both engineers and scientists.

The purpose of this book is to present a thorough introduction to methods for solving differential equations. Clear and precise explanations are illustrated with numerous examples to provide both the theory and the application of that theory.
