Seen through the eyes of an architect-photographer, "The Architecture of Natural Light" is the first publication to consider the many effects of natural illumination in contemporary buildings. This comprehensive and thoughtful survey begins with a brief introduction to the history of architecture, seen through the advances and experimentation put forward by architects over the centuries. For all those seeking to or interested in creating space that transcends the physical, "The Architecture of Natural Light" is a powerful and poetic yet practical survey that provides an original and timeless approach to contemporary architecture.

评论

artificial light.. 伪标题

扫盲向：非诗意地对光的应用分了七类，Evanescence, Procession, Veils of glass, Atomization, Canalization, Atmospheric silence, Luminescence.时间性的应用，不同透光材料应用，建筑结构对光的影响这几个方面给我印象比较深刻。案例选取不错，比起lighting in architecture那个，这本还是natural很多的。
