

A Primer on Scientific Programming with Python

[A Primer on Scientific Programming with Python_ 下载链接1](#)

著者:Hans Petter Langtangen

出版者:Springer-Verlag Berlin

出版时间:2009

装帧:hbk

isbn:9783642024740

The book serves as a first introduction to computer programming of scientific applications, using the high-level Python language. The exposition is example- and

problem-oriented, where the applications are taken from mathematics, numerical calculus, statistics, physics, biology, and finance. The book teaches "Matlab-style" and procedural programming as well as object-oriented programming. High school mathematics is a required background, and it is advantageous to study classical and numerical one-variable calculus in parallel with reading this book. Besides learning how to program computers, the reader will also learn how to solve mathematical problems, arising in various branches of science and engineering, with the aid of numerical methods and programming. By blending programming, mathematics and scientific applications, the book lays a solid foundation for practicing computational science.
