isbn:9780137221905

Written in a concise, easy-to-read style, this handbook shows how to modify computer systems to meet the needs of international users. The handbook takes readers on a tour of the many linguistic and cultural conventions used throughout the world - from

Japanese to German to Thai - discussing how to break old programming habits in order to design in the flexibility needed to handle a variety of differing user needs. The text also covers changes that need to be made to technical documentation in order to describe systems accurately to international users. It includes code examples in C, and describes specific internationalization facilities associated with UNIX-like systems.
