出版时间:2001-09-01

装帧:Paperback

isbn:9780879696092

Jim Watson is one of the world's most famous scientists. A principal architect and visionary of modern biology, a Nobel Prize winner at 34, and best selling author at 40 (The Double Helix), he has been a fearless commentator on the march of DNA science and its impact on society for over twenty years. This sparkling collection was a bestseller in hardcover, and, for the paperback edition, the author has added three newly written essays containing his reflections on the survival value of pursuing happiness, advice for new college graduates, and his thoughts on the completion of a draft of the human genome, a project he initiated over ten years ago.
