Anne Moir's groundbreaking 1990 book "Brain Sex" is reprised here with more on sexuality and biology. What is the true incidence of homosexuality among males? Are health food diets doing men in? Are feminine-influenced teaching styles driving boys out of the economy? Do men really need to "share their feelings"?

Never afraid to be controversial about sacred gender cows, and always throwing in the research data to back up her points, this author entertains and educates. She speaks for better understanding of each other and respect even as we go beyond our biology.

"We tell of the biology which swims within us and, equally, of the social environment in which we swim, so that men and women might rise above both." (Why Men Don't Iron p.22)
