Global warming: it's one of the hottest scientific and political issues of today. And yet we've all found ourselves asking ...

- It's freezing outside--where's global warming now?
- Climate is always changing--how do we know this isn't just a cycle?
- Why should Christians care about global warming when we know the world won't end that way?

For all the talk about climate change, there's still a great deal of debate about what it all means, especially among Christians. A CLIMATE FOR CHANGE offers straightforward answers to these questions, without the spin. This book untangles the complex science and tackles many long-held misconceptions about global warming. Authored by a climate scientist and a pastor, A CLIMATE FOR CHANGE boldly explores the role our Christian faith can play in guiding our opinions on this important global issue.
