A Shrinking Disease Due to Chronic Sexual Starvation What is Cancer? Traditionally, medical science has thought of it as an invasive tumor arising spontaneously in an otherwise healthy organism. In contrast, Wilhelm Reich defines cancer not as a tumor--the tumor is merely a late manifestation of the disease--but a systemic disease due to chronic thwarting of natural sexual functioning. In this radically different scientific investigation of a process that ends, literally, in the putrefaction of the living body due to chronic suffocation of the tissues, Reich has arrived at the conclusion that "cancer is the most significant somatic expression of biophysiological effect of sexual stasis." If this is so, there is a far greater possibility for prevention of cancer than for its treatment. "The Cancer Biopathy" is Volume II of "The Discovery of the Orgone," Volume I is "The Function of the Orgasm."
