Controversies over such issues as nuclear waste, genetically modified organisms, asbestos, tobacco, gene therapy, avian flu, and cell phone towers arise almost daily as rapid scientific and technological advances create uncertainty and bring about unforeseen concerns. The authors of *Acting in an Uncertain World* argue that political institutions must be expanded and improved to manage these controversies, to transform them into productive conversations, and to bring about "technical democracy." They show how "hybrid forums"--in which experts, non-experts, ordinary citizens, and politicians come together--reveal the limits of traditional delegative democracies, in which decisions are made by quasi-professional politicians and techno-scientific information is the domain of specialists in laboratories. The division between professionals and laypeople, the authors claim, is simply outmoded. The authors argue that laboratory research should be complemented by everyday experimentation pursued in the real world, and they describe various modes of cooperation between the two. They explore a range of concrete examples of hybrid forums that have dealt with sociotechnical controversies including nuclear waste disposal in France, industrial waste and birth defects in Japan, a childhood leukemia cluster in Woburn, Massachusetts, and mad cow disease in the United Kingdom. The authors discuss the implications for political decision making in general and describe a "dialogic" democracy that enriches traditional representative democracy. To invent new procedures for consultation and representation, they suggest, is to contribute to an endless process that is necessary for the ongoing democratization of democracy.

Science is too exclusive and reductionist, so we need more laypersons' participation. Is that the political project of ANT? The so called "technical democracy" really doesn't make any sense to me. Sociologists need to understand how silly it is to argue that the way to solve problems of democracy is to introduce even more democracy.
