State of the art visual effects, computer graphics, and real-time moving ultrasound pictures are giving us never-before-seen pictures from inside the mammalian womb. This book highlights the development of three different mammalian specials: the bottlenose dolphin, the Asian elephant, and the golden retriever. Along with comparisons to other mammals, including humans, and to other animals, it lays out the differences and similarities between the animals and offers answers to difficult questions as to why each animal evolved its particular reproductive strategy in the way that it did. "In the Womb: Animals" is a must for animal lovers and any one fascinated with the science and miracle of life and birth.
