著者:Alistair McMonnies

出版者:Addison Wesley

出版时间:2004-01-22

装帧:Paperback

isbn:9780201787054

This book takes an object-oriented approach to introduce Visual Basic .NET. The author begins by covering object-oriented analysis, design, and modeling using UML. He then moves into a detailed discussion of objects and classes, after which, readers begin developing their own short programs. Advanced topics such as data structures, components, and distributed/Internet programming are also covered. Programmers interested in learning the Visual Basic .NET programming language.

Object-Oriented Programming in Visual Basic .NET

Visual Basic .Net (VB .NET) has been a radical departure from previous versions of Visual Basic. The language is now fully object-oriented, and can be used either to write programs, or to create components that fit within the .NET architecture. If you are learning to program, VB .NET will give you a previously unheard-of mix of power, flexibility and ease of use.

The book approaches the language from an object-oriented (OO) perspective, demonstrating that Visual Basic can now be used to develop real industrial-strength OO systems and software components. It starts by covering OO analysis, design and modelling using UML, and then moves on to a full discussion of OO concepts. Advanced topics such as data structures, database applications and software design patterns are also covered. Throughout, students are shown how to develop short programs in order to illustrate the fundamentals of algorithm design and structured programming.

Features

- * Object-oriented programming is placed fully in the context of the software development life cycle
- * Includes a chapter on database development, covering database design principles, data access techniques and presenting data to the user-interface
- * The book is accompanied by a website at www.booksites.net/mcmonnies containing code for all programs in the book, additional program examples and information on using VB to program database applications. Instructor's materials include slides, tutorial sheets, lab sheets and assessment materials, all with solutions.

作者介绍:

Alistair McMonnies is currently a lecturer in the Computing and Information Systems department at the University of Paisley. He teaches software development using Visual Basic and C++ and is a Microsoft Certified Professional.
