装帧:Paperback

isbn:9780226808482

Conceived as three companion volumes that form an introduction to the central ideas of the modern natural sciences, these books--intelligent, informative, and accessible--are an excellent source for those who have no technical knowledge of the subject. Praise for *The Fabric of the Heavens*: "I cannot remember when I last went through a book, any book, with such all-devouring zest. What is more, even the most complex technicalities are reduced to a positively crystalline clarity: If I can understand them, anyone can. *The Fabric of the Heavens* is, in every sense of the word, an eye-opener."--Peter Green, *The Yorkshire Post* "Not until the last chapter of the book is [the reader] allowed to think again wholly as a modern man has become accustomed, by common sense, to think. The discipline is admirably suited to the authors' task, and cunningly devised for the reader's edification--and, indeed, for his delight."--*Physics Today* Praise for *The Architecture of Matter*: "The Architecture of Matter is to be warmly recommended. It is that rare achievement, a lively book which at the same time takes the fullest possible advantage of scholarly knowledge."--Charles C. Gillespie, *New York Times Book Review* "One is impressed by the felicity of the examples and by the lively clarity with which significant experiments and ideas are explained...No other history of science is so consistently challenging."--*Scientific American* Praise for *The Discovery of Time*: "A subject of absorbing interest ...is presented not as a history of science, but as a chapter in the history of ideas from the ancient Greeks to our own time."--*Times Literary Supplement*
